Managed SSE and SASE

Security and performance are critical to maintaining business agility and protecting sensitive assets. Globalgig's fully managed Secure Service Edge (SSE) and Secure Access Service Edge (SASE) solutions combine advanced security frameworks with optimized application performance, delivering seamless access for on-site and remote users. These solutions simplify complex network and security operations, providing centralized visibility, proactive management, and scalable protection to help your business adapt, grow, and thrive.

Secure Service Edge: Advanced Security for a Cloud-First World

Globalgig's **SSE** solution delivers a cloud-based, comprehensive security framework, leveraging cutting-edge technologies to protect your enterprise from evolving cyber threats. SSE integrates directly with your network, **ensuring secure, consistent access** for both site-based and mobile users no matter where they are.

Core SSE Capabilities:

- **Secure Web Gateway (SWG)** Safeguard your network from web-based threats, including malware and phishing attacks, with advanced web filtering, content control, and antivirus protection.

- **Zero Trust Network Access (ZTNA)** Enforce identity-driven access controls, allowing only authenticated users to connect to specific resources, whether on-premises or working remotely.

- **Cloud Access Security Broker (CASB)** Gain visibility into your cloud services, ensuring safe access to cloud applications while reducing risks and maintaining compliance.

- **Firewall-as-a-Service (FWaaS)** Provide cloud-native firewall protection and ensure consistent security enforcement, application control, and policy management, eliminating premises-based firewalls.

- **Data Loss Prevention (DLP)** Protect sensitive data by identifying and controlling its flow across your organization, preventing unauthorized access or exfiltration.

- **Enterprise Web Browser** Standardize and simplify web security for all mobile users by enforcing consistent, policy-driven protection across devices.

KEY FEATURES

- **Comprehensive Managed Security**
Complete management of your SSE or SASE solution, including monitoring and analysis of security events, ongoing policy management, and SSE platform administration.

- **AI-based Automation**
Enrichment, analysis, and resolution of 99.999% of security events, reducing manual inspections and minimizing alerts.

- **24/7 Security Operations Centers**
Continuous monitoring by skilled analysts with real-time response to security events.

- **Security Dashboard**
Real-time visualization of the state of the enterprise's cybersecurity, providing actionable insights and improvement advisories.

- **Compliance Support**
Enhanced features to help enterprises meet regulatory requirements.

- **Value**
An affordable and easy-to-consume service that enables the enterprise to implement Zero Trust security principles effectively.

Transforming Network Observability with Orchestra Insight

Globalgig's **Orchestra Insight** revolutionizes network observability, offering **AI-driven intelligence** that delivers unparalleled visibility into your SSE and SASE environments. Go beyond traditional monitoring by shifting the focus from device-centric to service-centric management. With real-time analytics and customizable dashboards, it enables you to proactively monitor network performance, identify service-impacting issues, and ensure consistent security and availability across your operations. By reducing noise and prioritizing actionable intelligence, **Orchestra Insight empowers you to take complete control of your network and make data-driven decisions with confidence**.
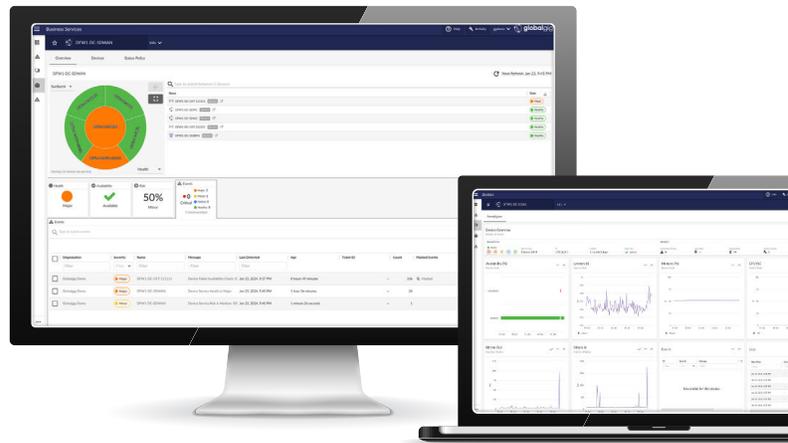

Secure Access Service Edge: Unified Security and Network Performance

SASE solutions **combine the benefits of SD-WAN and SSE**, delivering consistent security policies and optimized application performance to help your business scale efficiently. SASE ensures **protected access from any enterprise location**, offering remote workers a seamless user experience while safeguarding your network. Globalgig's unified SASE solution streamlines your infrastructure by removing the need for premises-based firewalls and multiple security solutions or vendors while reducing costs, and maintaining top-tier performance.

Managed SASE: Advanced Protection, Simplified Operations

Globalgig's fully managed cybersecurity solution strengthens and simplifies the protection of sensitive data and critical assets. Backed by cutting-edge technologies and 24/7 Security Operations Centers, managed SASE combines advanced AI-based automation with expert management for comprehensive protection and actionable insights.

Benefits of Managed SSE and SASE

- **Enterprise Security Visibility:** Provides continuous oversight of cybersecurity status, enabling proactive management of enterprise risks.

- **Ease of Implementation:** A turnkey solution to easily optimize cybersecurity operations and reduce overall costs.

- **Streamlined Security Operations:** Delivers expert management of security operations, reducing the burden on internal resources.

Globalgig's managed SSE and SASE solutions provide the perfect combination of advanced security and optimized network performance, ensuring seamless user access and robust protection for your business.

The Globalgig Advantage

Your business deserves a partner who not only understands your challenges but anticipates the opportunities ahead. Globalgig combines the expertise of our team with the transformative capabilities of our Orchestra platform. From design to deployment, our team delivers turnkey solutions that unify global communications with unmatched visibility, control, and optimization. By integrating SD-WAN, SSE, and SASE under a single service provider, Globalgig delivers the power of choice, flexibility, and enhanced security for global enterprises ensuring your business adapts and thrives in a changing world.
